

# **3/30 (A) or 3/31 (B) Lab**

## **Mini-Report on Phyla of Plants**

**Name:** \_\_\_\_\_

**Period:** \_\_\_\_\_ **Date:** \_\_\_\_\_

Read 22.2 and do a mini-report on each of the 3 phyla of plants from the book. The green headings are the phyla, so it is only 2 pages of information on each one to do a mini-report. You must do all 3 to receive full credit.

Make sure to include each of the following for each phylum:

- Where they are found and how they work
- Their life cycle or life cycles and any important info on their reproduction
- Any evolutionary information as to what was before them, what was after them, or even things they evolved themselves over time
- Any bolded key concepts or yellow vocabulary words from the book must also be explained
